

# Case Study.

**Client:** Education Centre

**Location:** Walthamstow, London

**Duration:** 3 Weeks

## Education Centre

We were tasked with providing 9 studios/classrooms/recording studios within the college with cooling/heating. The major challenge we faced was the Covid 19 outbreak, of which air re-circulation was at the forefront of the clients concern. Multiple options were given to provide extra protection measures, with different cost implications. The client opted for the installation of **Etherea range of equipment from Panasonic**, this had recently launched in line with the Covid demands and the new technology inhibited bacteria, odours and viruses up to 99.9%.

Each room was served by a wall mounted single split system, for totally independent control room by room.

**We installed 12 new wall mounted heat pump systems in total varying in capacity 3.5-7kw each.**
