

Case Study.

Client: NHS Offices

Location: Ashford, Kent

Duration: 6 Months

NHS Offices

Working with the refurbishment contractor, we undertook a series of upgrades to the existing HVAC systems which were outdated and inefficient. We also undertook reconfiguration work to some existing plant to better suit the new office layouts created as part of the office refurbishments.

Our installations comprised of 13no Daikin 12.5kw heat pump cassette systems to the open plan area and 3no 5kw heat pump wall mounted systems to newly created offices. This provided the client with heating and cooling to the areas and future proofed the building. We also replaced a MVHR ventilation system.
