

Case Study.

Client: NHS (Server Rooms)

Location: Various sites

Duration : Rolling Project Over
9 Months

NHS (Server Rooms)

We worked closely with the main contractor, who were creating and upgrading 35 new server rooms across Kent & Medway.

We installed over 35 new Mitsubishi Electric, Daikin and Mitsubishi Heavy Industry 2.5kw wall mounted units to provide climate control to each newly formed Server rooms. Our work was undertaken to tie in with the building works, across multiple locations throughout Kent & Medway sites, over a duration of 9 months. The main challenge for each installation was the time frame. To minimise down time detailed project planning and lots of flexibility was essential to ensure a smooth transition between trades and a timely finish.
